

➤ The strong link between
PDA, vehicle and surroundings

> Keeps communication in a secure grip

Most PDAs are used within demanding services such as transportation, security, surveillance or field service. All of them are dependent on functioning communication despite heat, cold, vibrations or dust. Cradle's durable holders provide protection, charging and secure connection in each vehicle. All day, all year round.

Embracing Communications

Cradle of Sweden develops and manufactures robust holders for personal digital assistants (PDA). The PDA holder may include everything from simple charging functions to customer adjusted connections for advanced mobile data systems. You specify, we build.

This flexible concept is based on a modular system with high quality plastic details which are combined into a complete holder. Every part has been designed to provide maximum fit for each type of PDA.

- Durable injection molded ABS plastic outer cover
- 3D scanned interior for perfect fit
- Original connectors, for the highest level of operational safety
- E-approved electronics for vehicle charging
- Standard or customer specific cabling design
- Robust mounting details

Model adjusted accessories such as leather holsters, GPS equipment for positioning and cabling complete the concept.

The modular manufacturing process enables short delivery times, which is particularly important for

large projects with varying requirement specifications. Development of new models is done through 3D scanning of an existing PDA unit, and prototype manufacture of PDA specific plastic details is done with free form printing (method for development of 3D models). In this way, functionality and quality are ensured before the manufacture of form tools for casting of the plastic details.

Our OEM concept also includes development of customer specific packaging design, manuals and labeling.

If you require a more specific solution, we are happy to work with you or your system developer to develop the right products. Contact us directly or through our local retailers and distributors.

Based on our long experience and genuine knowledge, we create reliable solutions for PDA manufacturers and developers of vehicle mounted mobile data systems. All of it gathered in flexible and robust PDA holders, built for many years' hassle free use in the field.

Or, as we say - Embracing Communications.

Cradle of Sweden develops and manufactures products and solutions for stationary and vehicle mounted charging of PDAs, as well as solutions for communication between PDAs, vehicles and surroundings within complex mobile data systems.
